EDUCATION & SKILLS

Purdue University

B.S. Data Science, Certificate in Entrepreneurship & Innovation

August 2020 - December 2023

Georgia Institute of Technology

M.S. Computer Science, Artificial intelligence

January 2026 - Current

Languages & Programming: Python, PowerShell, SQL, Go, Java, JavaScript, C#, R, FastAPI

Infrastructure & Virtualization: VMware ESXi, vCenter, Hyper-V, SCVMM, Azure Local, VDI, Cloud PCs, Out-of-Band Management, CyberArk PAM, Active Directory

Cloud & DevOps: Azure, AWS, Azure DevOps (CI/CD), Git, Terraform, Kubernetes, Agile Methodology

Data & Observability: Grafana, Prometheus, Microsoft SQL Server, MySQL, PostgreSQL, Neo4j, MongoDB, Spark, Hadoop, Kibana

AI: LangChain, Langgraph, Vector Databases, Text-to-SQL, RAG, Prompt Engineering, Cursor, Claude

PROFESSIONAL EXPERIENCE

Qualcomm - San Diego, CA

Infrastructure Engineer - Server Lifecycle Automation

Feb 2024 – Present

- Deployed 20+ production virtualization clusters (VMware ESXi, Azure/Hyper-V) spanning ~100 servers across global data centers. Owning the full server procurement-to-production lifecycle from hardware validation and firmware/BIOS configuration to networking and out-of-band management for customer-facing engineering workloads.
- Enabled continuous infrastructure telemetry ingestion (**≈100K+ rows, 30-minute cadence**) by building PowerShell and Python collection workflows orchestrated through Azure DevOps CI/CD pipelines, ensuring reliable analytics coverage across several environments.
- Drove director-level Azure virtualization (Hyper-V/Azure Local) capacity planning and migration decisions through executive dashboard adoption by designing a structured SQL data model and delivering Grafana dashboards and alerting for CPU, memory, and storage optimization.
- Reduced time-to-insight for root cause analysis by ~90% by developing a LangChain + Anthropic LLM + FAISS natural-language text-to-SQL agent with core semantic layer designed for infrastructure
- Increased pipeline reliability and operational visibility by implementing distributed low-latency ingestion VMs, validation checks, and automated monitoring and alerting, significantly reducing manual intervention.
- Secured credentials for **5,000+ ESXi hosts** (including **400+** monthly net-new onboardings) by leading CyberArk PAM onboarding, enabling automated password vaulting and rotation while safely excluding protected environments.
- Supported Cloud PC environment operations by enabling scalable provisioning and image management.

Qualcomm - San Diego, CA

Software Engineering Intern - Server Lifecycle Automation

May 2023 – August 2023

- Developed a showback notification framework encompassing query views and impactful visuals tailored for director-level use in order to reduce company-wide virtualization costs
- Enhanced the customizable features of a system management software framework used in IT; tested using Postman to ensure seamless functionality
- Constructed a VM template pipeline utilizing Azure DevOps and VMware vRealize which implemented new security features, monthly template updates, and automated deployment tests

Stryker - San Jose, CA

Software Design Engineering Intern

May 2022 - August 2022

- Created a GUI application using C# that dynamically presents and updates parameters to improve display monitor testing efficiency by 70%, used Microsoft SQL database to store performance data for further analysis

PROJECTS

Hunch - <https://www.myhunch.app/>

- Built a production-ready peer-to-peer prediction market platform enabling market creation, placing predictions, outcome resolution, and fair zero-sum payouts through a refund-based model.
- Designed a serverless architecture using Next.js Route Handlers, Supabase (PostgreSQL + Auth), Vercel, and Google OAuth, supporting market resolution workflows, profit/loss tracking, user statistics, and payouts

Certifications: Azure Fundamentals

Honors & Awards: Eagle Scout, Varsity Tennis Captain
